

# Report by INTEGRATE member countries - AUSTRIA

Dr. Georg Frank  
Institut für Waldbiodiversität und Naturschutz  
Abteilung Naturwaldreservate

**How are you preparing to make your forests more resilient to climate change and its potential impacts including biodiversity conservation?**

**What is your country's strategy in this respect until 2080?**

# What would you consider most noteworthy in your country approach?

**1 Missing entrepreneurs and lack of qualified forest workers – who will do the work?**

**2 More and more silvicultural knowledge and skills are being lost – does this lead to primitive silvicultural approaches ?**

- Integrative approach – needs more manpower and knowledge
- We need to strengthen the image of the people who work in the forest.

# What would you consider most noteworthy in your country approach?

**Integrative approach <---> „assisted migration“**

**Illusion that alien tree species and provenances will solve the problem – what happens, if we get the wrong ones?**

**Where to get the seeds?**

**Where to grow so many plants - nursery capacities?**

**What´s about epigenetic?**

**How long will it take?**

# What would you consider most noteworthy in your country approach?

## Segregation – Integration - Combination

How to get representative patterns of PFA's ?

How to get a balance between segregative and integrative approach ?

What to do with abandoned land ?

Precondition – how to solve the browsing problem?

# What would you consider most noteworthy in your country approach?

## Implementation

**Much more information, motivation and training of forest owners needed**

**Monetary valuation of active measures and omissions by the forest owner required**

## Who pays?

**Thank you for your attention!**
